

How to use eye ointment

1. Read the instructions on the label and treat only the eye stated.
2. If you think you may have difficulty using the eye ointment it may be better to get someone to do it for you.
3. Wash your hands with soap and water or hand sanitiser.
4. Take the cap off the tube. Avoid touching the top of the ointment.
5. Lie down or sit with your head tilted back.
6. Pull down the lower lid of the eye to form a pouch or pocket and look up.
7. Gently apply a strip of ointment (about 1cm) inside the inner surface of the lower lid, trying not to touch the eye or the eyelid with the top of the tube.
8. Close the eye for two minutes.
9. Remove any excess ointment from your eyelashes with a clean tissue.
10. Replace the cap on the tube and store the tube in a cool place.

Handy tips:

- Take the medicine as instructed by your doctor.
- If you miss a dose do not try to catch up by taking two or three missed doses at once.
- Your vision may be blurred for a short time afterwards. Don't drive or operate machinery until you can see clearly again.
- Keep all medicines out of the reach of children. Avoid taking medicine in front of very young children – they may copy your behaviour.
- Never share your medicines, even if someone else has similar symptoms.
